

Speed Bump Bolts: TS-NBS

Bolts for Asphalt use

Bolts for Concrete use

DESCRIPTION:

These bolts are supplied as pairs and are used for securing speed bumps and end caps to either asphalt or concrete. Two pairs are required for each speed bump, and one pair is required for each end cap. Standard Rawl-type bolts are used for concrete, while rubber sheathed-type bolts are used for asphalt and other relatively fragile substrates.

FEATURES:

Type	Rawl / Expansion
CONCRETE	Zinc plated steel bolt & shield
Requirements	20mm diameter x 65mm deep hole
ASPHALT	Zinc plated steel bolt & shield w/ rubber collar
Requirements	24mm diameter x 85mm deep hole
